Mechanical Engineer

[← Back to Career Ladder](#)

Job Level

Management-level (Supervisory)

Job Description

Plans and designs tools, engines, machines, and other mechanically functioning equipment. Oversees installation, operation, maintenance, and repair of such equipment as centralized heat, gas, water, and steam systems. Tasks:

1. Read and interpret blueprints, technical drawings, schematics, and computer-generated reports.
2. Confer with engineers and other personnel to implement operating procedures, resolve system malfunctions, and provide technical information.
3. Research and analyze customer design proposals, specifications, manuals, and other data to evaluate the feasibility, cost, and maintenance requirements of designs or applications.
4. Specify system components or direct modification of products to ensure conformance with engineering design and performance specifications.
5. Research, design, evaluate, install, operate, and maintain mechanical products, equipment, systems and processes to meet requirements, applying knowledge of engineering principles.
6. Investigate equipment failures and difficulties to diagnose faulty operation, and to make recommendations to maintenance crew.
7. Assist drafters in developing the structural design of products using drafting tools or computer- assisted design (CAD) or drafting equipment and software.
8. Provide feedback to design engineers on customer problems and needs.
9. Oversee installation, operation, maintenance, and repair to ensure that machines and equipment are installed and functioning according to specifications.
10. Conduct research that tests and analyzes the feasibility, design, operation and performance of equipment, components and systems.

Education

Bachelor's degree required, generally in engineering.

Workforce Preparation

Bachelor's degree required, generally in engineering.

Work Experience

Employees in these positions usually need several years of work-related experience, on-the-job training, and/or vocational training.

Licensure/Certification

Varies by state. In the state of Virginia, the Fundamentals of Engineering (FE) exam must be passed to be qualified as an Engineer-in-Training. The Principles and Practice of Engineering examination must be passed to be qualified as a Professional Engineer. Both examinations must be passed to qualify as an engineer.

Salary in the Capital District

\$32.49 hourly, \$67,600 annually

Employment Outlook in the Capital District

10-20% over the next 10 years, representing average growth.

Engineering Manager

[← Back to Career Ladder](#)

Job Level

Management-level (Supervisory)

Job Description

Plans, directs, or coordinates activities in engineering. Plans, directs, or coordinates research and development in engineering. Tasks:

1. Confer with management, production, and marketing staff to discuss project specifications and procedures.
2. Coordinate and direct projects, making detailed plans to accomplish goals and directing the integration of technical activities.
3. Analyze technology, resource needs, and market demand, to plan and assess the feasibility of projects.
4. Plan and direct the installation, testing, operation, maintenance, and repair of facilities and equipment.
5. Direct, review, and approve product design and changes.
6. Recruit employees, assign, direct, and evaluate their work, and oversee the development and maintenance of staff competence.
7. Prepare budgets, bids, and contracts, and direct the negotiation of research contracts.
8. Develop and implement policies, standards and procedures for the engineering and technical work performed in the department, service, laboratory or firm.
9. Perform administrative functions such as reviewing and writing reports, approving expenditures, enforcing rules, and making decisions about the purchase of materials or services.
10. Review and recommend or approve contracts and cost estimates.

Education

Technology Management program offered through Excelsior College, can help prepare for management type positions in the engineering field.

Workforce Preparation

A Bachelor's degree is the minimum formal education required. However, many positions also require a Master's degree and/or a Ph.D. or J.D. Employees may need some on-the-job training, but most of these positions assume that the person will already have the required skills, knowledge, work-related experience, and/or training.

Work Experience

Extensive skill, knowledge, and experience are needed for these positions. Many require more than five years of experience.

Licensure/Certification

Typically, an engineering manager must first be a licensed engineer. First, an Engineering-in-Training license must be acquired and then a Professional Engineer license must be acquired.

Salary in the Capital District

\$26.00-\$65.00 hourly,
\$55,000-\$110,000 annually

Employment Outlook in the Capital District

10-20% over the next 10 years, representing average growth.
Employers: American Energy Care, General Electric, Globalfoundries, Naval Nuclear Laboratory, NYSERDA

Industrial Production Manager

[← Back to Career Ladder](#)

Job Level

Management-level (Supervisory)

Job Description

Plans, directs, or coordinates the work activities and resources necessary for manufacturing products in accordance with cost, quality, and quantity specifications. Tasks:

1. Direct and coordinate production, processing, distribution, and marketing activities of industrial organization.
2. Develop budgets and approve expenditures for supplies, materials, and human resources, ensuring that materials, labor and equipment are used efficiently to meet production targets.
3. Review processing schedules and production orders to make decisions concerning inventory requirements, staffing requirements, work procedures, and duty assignments, considering budgetary limitations and time constraints.
4. Review operations and confer with technical or administrative staff to resolve production or processing problems.
5. Hire, train, evaluate, and discharge staff, and resolve personnel grievances.
6. Initiate and coordinate inventory and cost control programs.
7. Prepare and maintain production reports and personnel records.
8. Set and monitor product standards, examining samples of raw products or directing testing during processing, to ensure finished products are of prescribed quality.
9. Develop and implement production tracking and quality control systems, analyzing production, quality control, maintenance, and other operational reports, to detect production problems.
10. Review plans and confer with research and support staff to develop new products and processes.

Education

Industrial and Systems Engineering offered at RPI incorporates the resources needed to manage a production line.

Workforce Preparation

Bachelor's degree typically required.

Work Experience

Employees in these positions usually need several years of work-related experience, on-the-job training, and/or vocational training. A minimum of two to four years of work-related skill, knowledge, or experience is needed for these positions.

Licensure/Certification

None required.

Salary in the Capital District

\$18.00-\$35.00 hourly,
\$45,000-\$75,000 annually

Employment Outlook in the Capital District

0-9% over the next 10 years, representing slower than average growth.
Employers: Albany Molecular Research, Comfortex, Globalfoundries, Simmons Machine Tool Corporation
Search for Local Jobs: <http://newyork.us.jobs/>

Mechanical Engineering Technician

← [Back to Career Ladder](#)

Job Level

Mid-level (Non-supervisory)

Job Description

Applies theory and principles of mechanical engineering to modify, develop, and test machinery and equipment under direction of engineering staff or physical scientists. Tasks:

1. Prepare parts sketches and write work orders and purchase requests to be furnished by outside contractors.
2. Draft detail drawing or sketch for drafting room completion or to request parts fabrication by machine, sheet or wood shops.
3. Review project instructions and blueprints to ascertain test specifications, procedures, and objectives, and test nature of technical problems such as redesign.
4. Review project instructions and specifications to identify, modify and plan requirements fabrication, assembly and testing.
5. Devise, fabricate, and assemble new or modified mechanical components for products such as industrial machinery or equipment, and measuring instruments.
6. Discuss changes in design, method of manufacture and assembly, and drafting techniques and procedures with staff and coordinate corrections.
7. Set up and conduct tests of complete units and components under operational conditions to investigate proposals for improving equipment performance.
8. Inspect lines and figures for clarity and return erroneous drawings to designer for correction.
9. Analyze test results in relation to design or rated specifications and test objectives, and modify or adjust equipment to meet specifications.

Education

Mechanical Engineering Technology or Semiconductor Manufacturing Technology program given by Hudson Valley community college gives the right resources for most technical jobs in the advanced manufacturing career field.

Workforce Training Providers: <https://applications.labor.ny.gov/ETPL/>

Workforce Preparation

Associate's degree typically required. Bachelor's degree may be required. Most employers prefer to hire someone with at least a 2-year Associate's degree in engineering technology. Employees in these positions usually need one or two years of training involving both on-the-job experience and informal training with experienced workers.

Work Experience

Previous work-related skill, knowledge, or experience is required for these positions.

Licensure/Certification

License typically required. The National Institute for Certification in Engineering Technologies has established a voluntary certification program for engineering technicians. Certification is available at various levels.

Salary in the Capital District

\$18-\$28 hourly,
\$40,000-\$80,000 annually

Employment Outlook in the Capital District

10-20% over the next 10 years, representing average growth.
Employers: General Electric, Globalfoundries, Momentive Performance Materials, Regeneron
Search for Local Jobs: <http://newyork.us.jobs/>

Mechanical Engineering Technician (continued)

[← Back to Career Ladder](#)

Critical Development Experiences:

From Mechanical Engineering Technician to Mechanical Engineer

Mechanical Engineering positions require a Bachelor's degree, generally in engineering.

1. Confer with engineers and other personnel to implement operating procedures, resolve system malfunctions, and provide technical information.
2. Participate in researching and analyzing customer design proposals, specifications, manuals, and other data to evaluate the feasibility, cost, and maintenance requirements of designs or applications.
3. Participate in research that evaluates the feasibility, design, operation and performance of equipment, components and systems.¹

Critical Development Experiences:

From Mechanical Engineering Technician to Engineering Manager

For Engineering Manager positions, a Bachelor's degree is the minimum formal education required. However, many positions also require a Master's degree and/or a Ph.D. or J.D.

1. Confer with management, production, and marketing staff to discuss project specifications and procedures.
2. Coordinate and direct projects, make detailed plans to accomplish goals and direct the integration of technical activities.

Critical Development Experiences:

From Mechanical Engineering Technician to Industrial Production Manager

Industrial Production Manager positions require a Bachelor's degree, generally in engineering.

1. Participate in the initiation and coordination of inventory and cost control programs.
2. Participate in the development and implementation of production tracking and quality control systems, analyze production, quality control, maintenance, and other operational reports to detect production problems.
3. Review plans and confer with research and support staff to develop new products and processes.

Computer-Aided Design (CAD) Drafting Technician

← [Back to Career Ladder](#)

Job Level

Mid-level (Supervisory)

Job Description

Prepare drawings and topographical and relief maps used in civil engineering projects, such as highways, bridges, pipelines, flood control projects, and water and sewerage control systems. Tasks:

1. Use computer-aided drafting equipment and/or conventional drafting stations, technical handbooks, tables, calculators, and traditional drafting tools such as boards, pencils, protractors, and T-squares.
2. Confer with engineering staff and other personnel to resolve problems.
3. Draft working drawings, wiring diagrams, wiring connection specifications or cross-sections of underground cables, as required for instructions to installation crew.
4. Draw master sketches to scale showing relation of proposed installations to existing facilities and exact specifications and dimensions.
5. Measure factors that affect installation and arrangement of equipment, such as distances to be spanned by wire and cable.
6. Assemble documentation packages and produce drawing sets which are then checked by an engineer or an architect.
7. Review completed construction drawings and cost estimates for accuracy and conformity to standards and regulations.
8. Prepare and interpret specifications, calculating weights, volumes, and stress factors.
9. Explain drawings to production or construction teams and provide adjustments as necessary.
10. Supervise and train other technologists, technicians, and drafters.

Education

Machine Tool Technology offered by WSWHE BOCES can give one the skills to use CAD along with other programs in an engineering setting.

Workforce Training Providers: <https://applications.labor.ny.gov/ETPL/>

Workforce Preparation

Most positions require training in vocational schools, related on-the-job experience, or an Associate's degree. Some may require a Bachelor's degree. Usually need one or two years of training involving both on-the-job experience and informal training with experienced workers.

Work Experience

Previous work-related skill, knowledge, or experience is required for these positions.

Licensure/Certification

Licensure required. Type of licensing exam varies by specialization. For example, an Architectural CAD Drafter must pass the Architectural Licensing Exam in the state of occupation.

Salary in the Capital District

\$13.00-\$21.00 hourly,
\$30,000-\$54,000 annually

Employment Outlook in the Capital District

0-9% over the next 10 years, representing slower than average growth.
Employers: Digifabshop, Globalfoundries, PGS Millwork
Search for Local Jobs: <http://newyork.us.jobs/>

CAD Drafting Technician (continued)

[← Back to Career Ladder](#)

Critical Development Experiences:

From CAD Drafting Technician to Mechanical Engineer

Mechanical Engineering positions require a Bachelor's degree, generally in engineering.

1. Provide feedback to design engineers on customer problems and needs.
2. Assist in overseeing installation, operation, maintenance, and repair of equipment to ensure that machines are installed and functioning according to specifications.

Critical Development Experiences:

From CAD Drafting Technician to Engineering Manager

For Engineering Manager positions, a Bachelor's degree is the minimum formal education required. However, many positions also require a Master's degree and/or a Ph.D. or J.D.

1. Confer with management, production, and marketing staff to discuss project specifications and procedures.
2. Coordinate and direct a project, making detailed plans to accomplish goals and directing the integration of technical activities.

Critical Development Experiences:

From CAD Drafting Technician to Engineering Manager

Industrial Production Manager positions require a Bachelor's degree, generally in engineering.

1. Assist in the initiation and coordination of inventory and cost control programs.
2. Prepare and maintain production reports and personnel records.

Numerical Tool Programmer

[← Back to Career Ladder](#)

Job Level

Mid-level (Supervisory)

Job Description

Develops programs to control machining or processing of parts by automatic machine tools, equipment, or systems.
Tasks:

1. Determine the sequence of machine operations, and select the proper cutting tools needed to machine work pieces into the desired shapes.
2. Revise programs and/or tapes to eliminate errors, and retest programs to check that problems have been solved.
3. Analyze job orders, drawings, blueprints, specifications, printed circuit board pattern films, and design data in order to calculate dimensions, tool selection, machine speeds, and feed rates.
4. Determine reference points, machine cutting paths, or hole locations, and compute angular and linear dimensions, radii, and curvatures.
5. Observe machines on trial runs or conduct computer simulations to ensure that programs and machinery will function properly and produce items that meet specifications.
6. Compare encoded tapes or computer printouts with original part specifications and blueprints to verify accuracy of instructions.
7. Enter coordinates of hole locations into program memories by depressing pedals or buttons of programmers.
8. Write programs in the language of a machine's controller and store programs on media such as punch tapes, magnetic tapes, or disks.
9. Modify existing programs to enhance efficiency.

Education

Programs; Automation Systems certificate offered by FMCC and Electrical Technology/Advanced Manufacturing Pathway offered by WSWHE BOCES.

Workforce Training Providers: <https://applications.labor.ny.gov/ETPL/>

Workforce Preparation

Most positions require training in vocational schools, related on-the-job experience, or an Associate's degree. Some may require a Bachelor's degree.

Work Experience

Employees in these positions usually need one or two years of training involving both on-the-job experience and informal training with experienced workers.

Licensure/Certification

Licensure required. License requirements vary by state.

Salary in the Capital District

\$15.00-\$26.00 hourly,
\$40,000-\$55,000 annually

Employment Outlook in the Capital District

20-40% over the next 10 years, representing rapid growth.
Employers: Adirondack Studios, Applied Robotics Inc, Comfortex, General Electric
Search for Local Jobs: <http://newyork.us.jobs/>

Numerical Tool Programmer (continued)

[← Back to Career Ladder](#)

Critical Development Experiences:

From Numerical Tool Programmer to Mechanical Engineer

Mechanical Engineering positions require a Bachelor's degree, generally in engineering.

1. Assist in the development and implementation of production tracking and quality control systems. Analyze production, quality control, maintenance, and other operational reports to detect production problems.
2. Review operations and confer with technical or administrative staff to resolve production or processing problems.
3. Prepare and maintain production reports and personnel records.

Critical Development Experiences:

From Numerical Tool Programmer to Engineering Manager

For Engineering Manager positions, a Bachelor's degree is the minimum formal education required. However, many positions also require a Master's degree and/or a Ph.D. or J.D.

1. Confer with management, production, and marketing staff to discuss project specifications and procedures.
2. Coordinate and direct a project, making detailed plans to accomplish goals and directing the integration of technical activities.

Critical Development Experiences:

From Numerical Tool Programmer to Industrial Production Manager

Industrial Production Manager positions require a Bachelor's degree, generally in engineering.

1. Review operations and confer with technical or administrative staff to resolve production or processing problems.
2. Assist in the development and implementation of production tracking and quality control systems. Analyze production, quality control, maintenance, and other operational reports to detect production problems.

Production Supervisor

[← Back to Career Ladder](#)

Job Level

Mid-level (Supervisory)

Job Description

Supervise and coordinate the activities of production and operations workers, such as inspectors, precision workers, machine setters and operators, assemblers, fabricators, and plant and system operators.

Tasks:

1. Enforce safety and sanitation regulations.
2. Direct and coordinate the activities of employees engaged in the production or processing of goods, such as inspectors, machine setters, and fabricators.
3. Read and analyze charts, work orders, production schedules, and other records and reports, in order to determine production requirements and to evaluate current production estimates and outputs.
4. Confer with other supervisors to coordinate operations and activities within or between departments.
5. Plan and establish work schedules, assignments, and production sequences to meet production goals.
6. Inspect materials, products, or equipment to detect defects or malfunctions.
7. Demonstrate equipment operations and work and safety procedures to new employees, or assign employees to experienced workers for training.
8. Observe work, and monitor gauges, dials, and other indicators to ensure that operators conform to production or processing standards.
9. Confer with management or subordinates to resolve worker problems, complaints, or grievances.
10. Interpret specifications, blueprints, job orders, and company policies and procedures for workers.

Education

Programs; Supply Chain Management offered by SCCC and Plant Maintenance offered by WSWHE BOCES gives the correct skills to coordinate production activities.

Workforce Training Providers: <https://applications.labor.ny.gov/ETPL/>

Workforce Preparation

Most positions require training in vocational schools, related on-the-job experience, or an Associate's degree. Some may require a Bachelor's degree.

Work Experience

Previous work-related skill, knowledge, or experience is required for these positions. Employees usually need one or two years of training involving both on-the-job experience and informal training with experienced workers.

Licensure/Certification

Licensure required. License requirements vary by state.

Salary in the Capital District

\$15.00-\$26.00 hourly,
\$32,000-\$75,000 annually

Employment Outlook in the Capital District

0-9% over the next 10 years, representing slower than average growth.
Employers: Albany Molecular Research, Momentive Performance Materials Inc, Plug Power
Search for Local Jobs: <http://newyork.us.jobs/>

Production Supervisor (continued)

[← Back to Career Ladder](#)

Critical Development Experiences:

From Production Supervisor to Mechanical Engineer

Mechanical Engineering positions require a Bachelor's degree, generally in engineering.

1. Confer with engineers and other personnel to implement operating procedures, resolve system malfunctions, and provide technical information.
2. Assist drafters in developing the structural design of products using drafting tools or computer- assisted design (CAD) or drafting equipment and software.

Critical Development Experiences:

From Production Supervisor to Engineering Manager

For Engineering Manager positions, a Bachelor's degree is the minimum formal education required. However, many positions also require a Master's degree and/or a Ph.D. or J.D.

1. Prepare budgets, bids, and contracts, and direct the negotiation of research contracts.
2. Assist in developing and implementing policies, standards and procedures for the engineering and technical work performed in the department, service, laboratory or firm.
3. Assist in planning and directing the installation, testing, operation, maintenance, and repair of facilities and equipment.
4. Confer with management, production, and marketing staff to discuss project specifications and procedures.
5. Coordinate and direct projects, making detailed plans to accomplish goals and directing the integration of technical activities.

Critical Development Experiences:

From Production Supervisor to Industrial Production Manager

Industrial Production Manager positions require a Bachelor's degree, generally in engineering.

1. Direct and coordinate production, processing, distribution, and marketing activities of industrial organization
2. Review processing schedules and production orders to make decisions concerning inventory requirements, staffing requirements, work procedures, and duty assignments, considering budgetary limitations and time constraints.
3. Review operations and confer with technical or administrative staff to resolve production or processing problems.

Machinist

← [Back to Career Ladder](#)

Job Level

Entry-level (Non-supervisory)

Job Description

Set up and operate a variety of machine tools to produce precision parts and instruments. Includes precision instrument makers who fabricate, modify, or repair mechanical instruments. May also fabricate and modify parts to make or repair machine tools or maintain industrial machines, applying knowledge of mechanics, mathematics, metal properties, layout, and machining procedures. Tasks:

1. Calculate dimensions or tolerances, using instruments such as micrometers or Vernier calipers.
2. Machine parts to specifications, using machine tools, such as lathes, milling machines, shapers, or grinders.
3. Set up, adjust, or operate basic or specialized machine tools used to perform precision machining operations.
4. Align and secure holding fixtures, cutting tools, attachments, accessories, or materials onto machines.
5. Measure, examine, or test completed units to check for defects and ensure conformance to specifications, using precision instruments, such as micrometers.

Education

Advanced Manufacturing Technology program (HVCC), Manufacturing & Machining Technology (BOCES).

Workforce Preparation

Most occupations in this zone require training in vocational schools, related on-the-job experience, or an associate's degree.

Workforce Training Providers: <https://applications.labor.ny.gov/ETPL/>

Work Experience

Employees in these occupations usually need one or two years of training involving both on-the-job experience and informal training with experienced workers. A recognized apprenticeship program may be associated with these occupations.

Licensure/Certification

None required. A certification is not required for this position, but it is required by some employers in order to work on various job sites.

Salary in the Capital District

\$12.00-\$22.00 hourly,
\$25,000-\$45,000 annually

Employment Outlook in the Capital District

9-13% over the next 10 years, representing average growth.
Employers: Applied Robotics, Ball Metal Beverage Container Corp, General Electric, Seeley Machine
Search for Local Jobs: <http://newyork.us.jobs/>

Machinist (continued)

[← Back to Career Ladder](#)

Critical Development Experiences:

From Machinist to Mechanical Engineer

Mechanical Engineering positions require a Bachelor's degree, generally in engineering.

1. Confer with engineers and other personnel to implement operating procedures, resolve system malfunctions, and provide technical information.
2. Assist drafters in developing the structural design of products using drafting tools or computer- assisted design (CAD) or drafting equipment and software.

Critical Development Experiences:

From Machinist to Engineering Manager

For Engineering Manager positions, a Bachelor's degree is the minimum formal education required. However, many positions also require a Master's degree and/or a Ph.D. or J.D.

1. Prepare budgets, bids, and contracts, and direct the negotiation of research contracts.
2. Assist in developing and implementing policies, standards and procedures for the engineering and technical work performed in the department, service, laboratory or firm.
3. Assist in planning and directing the installation, testing, operation, maintenance, and repair of facilities and equipment.
4. Confer with management, production, and marketing staff to discuss project specifications and procedures.

Critical Development Experiences:

From Machinist to Industrial Production Manager

Industrial Production Manager positions require a Bachelor's degree, generally in engineering.

1. Direct and coordinate production, processing, distribution, and marketing activities of industrial organization
2. Review processing schedules and production orders to make decisions concerning inventory requirements, staffing requirements, work procedures, and duty assignments, considering budgetary limitations and time constraints.
3. Review operations and confer with technical or administrative staff to resolve production or processing problems.

Maintenance Technician

← [Back to Career Ladder](#)

Job Level

Entry-level (Non-supervisory)

Job Description

Perform work involving the skills of two or more maintenance or craft occupations to keep machines, mechanical equipment, or the structure of an establishment in repair. Duties may involve pipe fitting; boiler making; insulating; welding; machining; carpentry; repairing electrical or mechanical equipment; installing, aligning, and balancing new equipment; and repairing buildings, floors, or stairs. Tasks:

1. Inspect, operate, or test machinery or equipment to diagnose machine malfunctions.
2. Dismantle machines, equipment, or devices to access and remove defective parts, using hoists, cranes, hand tools, or power tools.
3. Perform routine maintenance, such as inspecting drives, motors, or belts, checking fluid levels, replacing filters, or doing other preventive maintenance actions.
4. Diagnose mechanical problems and determine how to correct them, checking blueprints, repair manuals, or parts catalogs, as necessary.
5. Repair machines, equipment, or structures, using tools such as hammers, hoists, saws, drills, wrenches, or equipment such as precision measuring instruments or electrical or electronic testing devices.

Education

Mechatronics programs at Hudson Valley Community College, Electromechanical and Instrumentation and Maintenance Technologies/Technicians at Excelsior College
Workforce Training Providers: <https://applications.labor.ny.gov/ETPL/>

Workforce Preparation

These occupations require training in vocational schools, related on-the-job experience, or an associate's degree.

Work Experience

Previous work-related skill, knowledge, or experience is required for these occupations. For example, an electrician must have completed three or four years of apprenticeship or several years of vocational training, and often must have passed a licensing exam, in order to perform the job.

Work Values

- Support — Occupations that satisfy this work value offer supportive management that stands behind employees. Corresponding needs are Company Policies, Supervision: Human Relations and Supervision: Technical.
- Independence — Occupations that satisfy this work value allow employees to work on their own and make decisions. Corresponding needs are Creativity, Responsibility and Autonomy.
- Relationships — Occupations that satisfy this work value allow employees to provide service to others and work with co-workers in a friendly non-competitive environment. Corresponding needs are Co-workers, Moral Values and Social Service.

Licensure/Certification

None required. A certification is not required for this position, but it is required by some employers in order to work on various job sites.

Salary in the Capital District

\$16.00-\$30.00 hourly,
\$34,000-\$67,000 annually

Employment Outlook in the Capital District

5-13% over the next 10 years, representing high growth.
Employers: Amtrak, Janitronics, National Grid, Naval Nuclear Laboratory, Roland J. Down, Search for Local Jobs: <http://newyork.us.jobs/>

3. Review operations and confer with technical or administrative staff to resolve production or processing problems.

Welder

[← Back to Career Ladder](#)

Job Level

Entry-level (Non-supervisory)

Job Description

Uses hand-welding or flame-cutting equipment to weld or join metal components or to fill holes, indentations, or seams of fabricated metal products. Tasks:

1. Operate safety equipment, and use safe work habits.
2. Weld components in flat, vertical, or overhead positions.
3. Ignite torches or start power supplies and strike arcs by touching electrodes to metals being welded.
4. Clamp, hold, tack-weld, heat-bend, grind and/or bolt component parts to obtain required configurations and positions for welding.
5. Detect faulty operation of equipment and/or defective materials, and notify supervisors.
6. Operate manual or semi-automatic welding equipment to fuse metal segments, using processes such as gas tungsten arc, gas metal arc, flux-cored arc, plasma arc, shielded metal arc, resistance welding, and submerged arc welding.
7. Monitor the fitting, burning, and welding processes to avoid overheating of parts or warping, shrinking, distortion, or expansion of material.
8. Examine work pieces for defects, and measure work pieces with straightedges or templates to ensure conformance with specifications.
9. Recognize, set up, and operate hand and power tools common to the welding trade, such as shielded metal arc and gas metal arc welding equipment.

Education

Programs; Welder Certification Program for Adult Students (Capital Region BOCES) & Welding & Metal Fabrication CTE (Capital Region BOCES). NYS DOT offers certificate exams for MIG and TIG Welding, Modern Welding School programs.
Workforce Training Providers: <https://applications.labor.ny.gov/ETPL/>

Workforce Preparation

These positions usually require a high school diploma and may require some vocational training or job-related course work. In some cases, an Associate's or Bachelor's degree could be needed.

Work Experience

Some previous work-related skill, knowledge, or experience may be helpful in these positions, but usually is not needed. Employees may be required to work a few months to one year with experienced employees.

Licensure/Certification

A certification is not required for this position, but it is required by some employers in order to work on various job sites. Often need training/certification in SMAW, GTAW (TIG), GMAW (MIG), and/or Flux Core Arc Welding or Wire Wheel Welding.

Salary in the Capital District

\$15.00-\$23.00 hourly,
\$31,000-\$60,000 annually

Employment Outlook in the Capital District

0-9% over the next 10 years, representing slower than average growth.
Employers: Arcadia Manufacturing Group, Seeley Machine, Simmons Machine Tool Corporation

Welder (continued)

[← Back to Career Ladder](#)

Critical Development Experiences:

From Welder to Mechanical Engineering Technician

Mechanical Engineering Technician positions typically require an Associate's degree. Employees in these positions usually need one or two years of training involving both on-the-job experience and informal training with experienced workers.

1. Assist in devising, fabricating, and assembling new or modified mechanical components for products such as industrial machinery or equipment, and measuring instruments.

Critical Development Experiences:

From Welder to CAD Drafting Technician

Most CAD Drafting Technician positions require training in vocational schools, related on-the-job experience, or an Associate's degree. Some may require a Bachelor's degree. Employees usually need one or two years of training involving both on-the-job experience and informal training with experienced workers.

1. Demonstrate equipment operations and work and safety procedures to new employees, or assign employees to experienced workers for training.
2. Observe work, and monitor gauges, dials, and other indicators to ensure that operators conform to production or processing standards.

Critical Development Experiences:

From Welder to Numerical Tool Programmer

Most Numerical Tool Programmer positions require training in vocational schools, related on-the-job experience, or an Associate's degree. Some may require a Bachelor's degree. Employees in these positions usually need one or two years of training involving both on-the-job experience and informal training with experienced workers.

1. Determine the sequence of machine operations, and select the proper cutting tools needed to machine work pieces into the desired shapes.
2. Observe machines on trial runs or conduct computer simulations to ensure that programs and machinery will function properly and produce items that meet specifications.

Critical Development Experiences:

From Welder to Production Supervisor

Most Production Supervisor positions require training in vocational schools, related on-the-job experience, or an Associate's degree. Some may require a Bachelor's degree. Employees in Production Supervisor positions usually need one or two years of training involving both on-the-job experience and informal training with experienced workers.

1. Inspect materials, products, or equipment to detect defects or malfunctions.
2. Observe work, and monitor gauges, dials, and other indicators to ensure that operators conform to production or processing standards.

Welder (continued)

[← Back to Career Ladder](#)

Critical Development Experiences:

From Welder to Maintenance Technician

Maintenance Technician positions typically require an Associate's degree or related certification from a tech school. Employees in these positions usually need one or two years of machine operation, training involving both on-the-job experience and informal training with experienced workers, and off site technical training..

1. Inspect, operate, or test machinery or equipment to diagnose machine malfunctions.
2. Dismantle machines, equipment, or devices to access and remove defective parts, using hoists, cranes, hand tools, or power tools.
3. Perform routine maintenance, such as inspecting drives, motors, or belts, checking fluid levels, replacing filters, or doing other preventive maintenance actions.
4. Diagnose mechanical problems and determine how to correct them, checking blueprints, repair manuals, or parts catalogs, as necessary.
5. Repair machines, equipment, or structures, using tools such as hammers, hoists, saws, drills, wrenches, or equipment such as precision measuring instruments or electrical or electronic testing devices.

Machine Operator

[← Back to Career Ladder](#)

Job Level

Entry-level (Non-supervisory)

Job Description

Operate machines or robots to perform one or more machine functions. Tasks:

1. Observe machine operation to detect workpiece defects or machine malfunctions, adjusting machines as necessary.
2. Inspect workpieces for defects, and measure workpieces to determine accuracy of machine operation, using rules, templates, or other measuring instruments.
3. Read blueprints or job orders to determine product specifications and tooling instructions and to plan operational sequences.
4. Measure dimensions of finished workpieces to ensure conformance to specifications, using precision measuring instruments, templates, and fixtures.
5. Mount, install, align, and secure tools, attachments, fixtures, and workpieces on machines, using hand tools and precision measuring instruments.
6. Stop machines to remove finished workpieces or to change tooling, setup, or workpiece placement, according to required machining sequences.
7. Transfer commands from servers to computer numerical control (CNC) modules, using computer network links.
8. Check to ensure that workpieces are properly lubricated and cooled during machine operation.

Education

Manufacturing Skills Standards Council (MSCC) & Certified Logistics Technician (CLT) Warehouse Training class offered by SCCC will give the basic knowledge of how to work with certain automated machines.

Workforce Training Providers: <https://applications.labor.ny.gov/ETPL/>

Workforce Preparation

Most occupations in this zone require training in vocational schools, related on-the-job experience, or an associate's degree.

Work Experience

Employees in these occupations usually need one or two years of training involving both on-the-job experience and informal training with experienced workers. A recognized apprenticeship program may be associated with these occupations.

Licensure/Certification

None required. A certification is not required for this position, but it is required by some employers in order to work on various job sites.

Salary in the Capital District

\$12.00-\$16.00 hourly,
\$21,000-\$39,000 annually

Employment Outlook in the Capital District

7-15% over the next 10 years, representing average growth.
Employers: Adirondack Studios, Comfortex, LAI International, Quad Graphics,

Machine Operator (continued)

[← Back to Career Ladder](#)

Critical Development Experiences:

From Machine Operator to Mechanical Engineering Technician

Mechanical Engineering Technician positions typically require an Associate's degree. Employees in these positions usually need one or two years of training involving both on-the-job experience and informal training with experienced workers.

1. Assist in devising, fabricating, and assembling new or modified mechanical components for products such as industrial machinery or equipment, and measuring instruments.

Critical Development Experiences:

From Machine Operator to CAD Drafting Technician

Most CAD Drafting Technician positions require training in vocational schools, related on-the-job experience, or an Associate's degree. Some may require a Bachelor's degree. Employees usually need one or two years of training involving both on-the-job experience and informal training with experienced workers.

1. Demonstrate equipment operations and work and safety procedures to new employees, or assign employees to experienced workers for training.
2. Observe work, and monitor gauges, dials, and other indicators to ensure that operators conform to production or processing standards.

Critical Development Experiences:

From Machine Operator to Numerical Tool Programmer

Most Numerical Tool Programmer positions require training in vocational schools, related on-the-job experience, or an Associate's degree. Some may require a Bachelor's degree. Employees in these positions usually need one or two years of training involving both on-the-job experience and informal training with experienced workers.

1. Determine the sequence of machine operations, and select the proper cutting tools needed to machine work pieces into the desired shapes.
2. Observe machines on trial runs or conduct computer simulations to ensure that programs and machinery will function properly and produce items that meet specifications.

Critical Development Experiences:

From Machine Operator to Production Supervisor

Most Production Supervisor positions require training in vocational schools, related on-the-job experience, or an Associate's degree. Some may require a Bachelor's degree. Employees in Production Supervisor positions usually need one or two years of training involving both on-the-job experience and informal training with experienced workers.

1. Inspect materials, products, or equipment to detect defects or malfunctions.
2. Observe work, and monitor gauges, dials, and other indicators to ensure that operators conform to production or processing standards.

Production Assistant

[← Back to Career Ladder](#)

Job Level

Entry-level (Non-supervisory)

Job Description

Production Assistants can have a wide variety of basic production tasks from modifying electrical or electronic equipment, such as computers, monitoring automated systems, tests equipment telemetering systems, electric motors, and batteries to assembly, packing and basic inspection of final products. Tasks:

1. Inspect and test wiring installations, assemblies, and circuits for resistance factors and for operation; and record results.
2. Assemble electrical or electronic systems and support structures; and install components, units, subassemblies, wiring, and assembly casings, using rivets, bolts, soldering and micro-welding equipment.
3. Adjust, repair, or replace electrical or electronic component parts to correct defects and to ensure conformance to specifications.
4. Clean parts, using cleaning solutions, air hoses, and cloths.
5. Read and interpret schematic drawings, diagrams, blueprints, specifications, work orders, and reports in order to determine materials requirements and assembly instructions.
6. Mark and tag components so that stock inventory can be tracked and identified.
7. Position, align, and adjust work pieces and electrical parts to facilitate wiring and assembly.
8. Pack finished assemblies for shipment and transport them to storage areas, using hoists or hand trucks.
9. Confer with supervisors or engineers to plan and review work activities, and to resolve production problems.
10. Explain assembly procedures or techniques to other workers.

Education

New Visions Engineering Program offered at HVCC gives the baseline understanding of how to work in an advanced manufacturing company.

Workforce Training Providers: <https://applications.labor.ny.gov/ETPL/>

Workforce Preparation

Employees in these positions need anywhere from a few months to one year of on-the-job training with experienced employees.

Work Experience

Some previous work-related skill, knowledge, or experience may be helpful in these positions, but usually is not needed.

Work Values

- **Support** — Occupations that satisfy this work value offer supportive management that stands behind employees. Corresponding needs are Company Policies, Supervision: Human Relations and Supervision: Technical.
- **Relationships** — Occupations that satisfy this work value allow employees to provide service to others and work with co-workers in a friendly non-competitive environment. Corresponding needs are Co-workers, Moral Values and Social Service.
- **Working Conditions** — Occupations that satisfy this work value offer job security and good working conditions. Corresponding needs are Activity, Compensation, Independence, Security, Variety and Working Conditions.

Licensure / Certification

None required.

Production Assistant (continued)

Critical Development Experiences:

From Production Assistant worker to Welder

Welder positions usually require a high school diploma and may require some vocational training or job-related course work.

1. Clamp, hold, tack-weld, heat-bend, grind and/or bolt component parts to obtain required configurations and positions for welding.
2. Monitor the fitting, burning, and welding processes to avoid overheating of parts or warping, shrinking, distortion, or expansion of material.
3. Often need training/certification in SMAW, GTAW (TIG), GMAW (MIG), and/or Flux Core Arc Welding or Wire Wheel Welding.

Critical Development Experiences:

From Production Assistant worker to Machine Operator

Machine Operator positions usually require a high school diploma and may require some vocational training, job-related course work, and certification programs offered by machine manufacturer or community college.

1. Read blueprints or job orders to determine product specifications and tooling instructions and to plan operational sequences.
2. Measure dimensions of finished workpieces to ensure conformance to specifications, using precision measuring instruments, templates, and fixtures.
3. Mount, install, align, and secure tools, attachments, fixtures, and workpieces on machines, using hand tools and precision measuring instruments.
4. Transfer commands from servers to computer numerical control (CNC) modules, using computer network links.
5. Check to ensure that workpieces are properly lubricated and cooled during machine operation.
